

Advanced Composites Manufacturing Training at ATAC

NEWSLETTER: MAY 2016

New ACM Course: Intro to Non-Destructive Testing

The need to test parts without damaging them is a critical step in advanced manufacturing, whether the part is made of composite material, cast metals or is welded. This new course offers an introduction to this high demand field and the various testing processes. Content will include an overview of career opportunities, training requirements, and certification programs for the NDT profession. Students will be introduced to testing methods, equipment, and interpretation of results. In addition, they will hear from industry representatives and attend field trips organized by instructors.

Students can enroll now for courses starting: May 9th.

Upcoming Events:

- **Programs Start:**
June 20
August 29
October 24
- **Attend a Weekly Info Session.**
